

Study manager - Bug #1674

A horizontal row of 20 empty square boxes for writing names.

14.01.2023 16:28 - Anonymous

Status:	New	Start date:	14.01.2023
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Spent time:	0.00 hour
<b>Description</b>			
The task involves the development of a new feature for a mobile application. The feature will allow users to search for nearby restaurants based on their location and preferences. The developer will need to integrate a geolocation API to get the user's current location and a database to store and retrieve restaurant data. The developer will also need to implement a search algorithm to filter results based on user input. The developer will work on this task for approximately 5 hours.			
The developer will start by setting up the project and integrating the required APIs. They will then design the user interface and implement the search logic. Finally, they will test the feature thoroughly and make any necessary adjustments.			
The developer will work on this task for approximately 5 hours.
