Description

[Flappy Bird](#) is a 2D walking game where your task is just to keep the controlled bird from falling to the ground and from hitting the pipes along the way. You need to touch the screen for the bird to flap its wings to increase the altitude. The more pipes you go through, the higher your score will be. It sounds simple, but things are not as easy as you think. The bird in Flappy Bird is even more difficult to control than... a real plane. Whenever you stop tapping the screen, this bird will immediately head to the ground. No matter how long you've played, you still won't be able to accurately estimate the altitude of each takeoff. is a 2D walking game where your task is just to keep the controlled bird from falling to the ground and from hitting the pipes along the way. Are you able to maintain a steady rhythm and quick reactions in order to complete the challenging jumping and soaring levels found in geometry dash":<https://geometrydash-free.com/>? Allow the throbbing beats to direct you as you flip, spin, and tap your way across the treacherous terrain and beyond, provided that you are able to stay alive that long.
