

Study manager - Feature #618

make study manager name a configurable parameter

29.04.2018 23:35 - Miroslav Blaško

Status:	New	Start date:	29.04.2018
Priority:	Low	Due date:	
Assignee:	Miroslav Blaško	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Spent time:	0.00 hour
Description			
Currently, the manager is called Fertility study manager. Instead, there should be placeholders there, which would be replaced with default value i.e. Study Manager. The complete application should be build from a separate git repository + integration tests.			

History

#1 - 29.04.2018 23:35 - Miroslav Blaško

- Subject changed from make name of study manager configurable to make study manager name a configurable parameter

#2 - 05.04.2022 18:38 - Anonymous

Depending on the entity, configuration parameters are saved in a variety of methods. Low-level configuration data, such as NIC features or server hardware settings, is always stored in a firmware repository, whereas OS and higher-level data is stored in "configuration files" or software databases. Configuration files are notoriously difficult to manage and are typically only secured by access control techniques (for example, read by all, update by "root" only). Extensible Markup Language (XML)-based databases are increasingly being used for configuration management data because they enable for easy and automated management. Get some [music games](#) and [read more](#) about them here.
